INTRODUCTION

The Federal Meat Inspection Act and the Poultry Products Inspection Act authorize the U.S. Department of Agriculture (USDA) to require that the slaughter of animals and the subsequent processing of meat and poultry products be done in a sanitary manner. The Food Safety and Inspection Service (FSIS), the agency within the USDA responsible for meat and poultry inspection, administers sanitary requirements for equipment and facilities as one means of ensuring proper sanitation. These requirements are a primary reason for the high level of sanitation routinely practiced in federally inspected meat and poultry establishments.

EQUIPMENT ACCEPTANCE PROGRAM

The Equipment Branch; Facilities Equipment and Sanitation Division (FESD), operates the Equipment Acceptance Program. This program is the basis for the fair and uniform application of requirements for the materials of construction and the sanitary design of equipment. Equipment shall be formally evaluated by the Equipment Branch before the USDA inspector will allow its use. This condition applies to new, used, modified and re-conditioned equipment. Equipment manufacturers who want to have their commercially available equipment listed in this publication must submit all information necessary for the formal review and evaluation. However, plant owners or operators are ultimately responsible for insuring that the equipment used in their establishment is USDA accepted.

The Equipment Acceptance Program focuses on correcting problems during the initial development of equipment instead of resolving problems which may result when improperly designed or constructed equipment is put into widespread use. This preventive mode of action benefits equipment manufacturers, food processors, USDA inspectors, and American consumers.

EXCLUDED EQUIPMENT

Equipment which was in place and in use before 1968, which was prior to the creation of the Equipment Acceptance Program, or at the time a state inspected establishment becomes federally inspected need not be formally reviewed and accepted provided the equipment is in a good state of repair and it can be operated and maintained in a manner acceptable to the USDA inspector in charge. Plants may transfer this equipment from one federally inspected establishment to another provided both establishments are under the same ownership. The USDA inspector in charge at the receiving establishment will determine if the transferred equipment is in a good state of repair and is installed, operated, and maintained in an acceptable manner.

EXEMPTIONS

The following categories of equipment need not be formally reviewed and accepted by the Equipment Branch if such equipment is installed, operated, and maintained in a manner acceptable to the USDA inspector in charge.

1. Simple hand tools.
2. Equipment used to prepare packaging materials.
3. Equipment used on fully packaged product.
4. Equipment used in inedible departments.
5. Central cleaning systems.
6. Utensil and equipment cleaning machinery.
7. Pails, buckets, etc.*
8. Pallets for packaged product.
9. Picking fingers.*
10. Tanks for fully finished oils.
11. Simple can openers.
12. Chutes, flumes, poultry hangback racks, supporting stands, and brackets.
13. Equipment used for storing and transporting fully rendered animal fats and vegetable oils.
14. Vegetable cleaning equipment (not applicable to spin type washers/dryers).
15. Insect control units.
16. Shipping containers.
17. Pressure storage vessels for refrigerants (not applicable to CO2 snow making equipment).
18. Water softeners, water heaters, water meters, and chemical dispensers.
19. Can and jar washers/cleaners.
20. Dry spice mixing equipment.
21. Hot air shrink tunnels.
22. Equipment for handling live poultry and meat animals.
23. Air and water filters.
24. Devices for measuring physical characteristics (temperature, pressure, etc.).
25. Casing preparation equipment.

* The product contact area of this equipment must be USDA accepted for chemical composition. See page 7.

NON-EXEMPT CONDITIONS

1. Non-meat and non-poultry equipment - Equipment used to prepare a food product(s) that is not subject to the Federal Meat Inspection Act or Poultry Inspection Act but will be combined into a meat or poultry product must be USDA accepted. Equipment used exclusively for non-meat or non-poultry items and located in separate processing areas need not be formally reviewed and accepted by the Equipment Branch. Furthermore, the standards commonly associated with meat and poultry equipment may not always apply to other types of food equipment.

2. Bakery equipment - Equipment installed in processing departments to prepare dough and crust for filling or fabricating operations must be formally reviewed and accepted by the Equipment Branch. However, equipment used in separate rooms for preparing bakery type items need not be formally reviewed and accepted. The USDA inspector in charge will determine if such equipment is constructed and maintained in a manner that will ensure the production of unadulterated products in a clean environment. The standards for meat and poultry processing equipment may not apply to all bakery equipment due to differences in daily cleanup procedures.

3. New establishments - Equipment intended for use in newly constructed establishments must be formally reviewed and accepted by the Equipment Branch if not previously accepted and listed in this publication.

4. Custom made equipment - Plant personnel may build their own equipment or have an outside contractor fabricate equipment for them. Even though it is custom made and not intended for resale, such equipment must be formally reviewed and accepted by the Equipment Branch. The same standards are applicable to custom made equipment as are applicable to commercially available equipment. In addition, the information necessary to review and evaluate custom made equipment is the same as that necessary for commercially available equipment.

Equipment manufacturers or brokers are sometimes not interested in securing USDA acceptance for their equipment. In such events, equipment is considered the same as custom made and establishment personnel are responsible for supplying all the information necessary for the review and acceptance by the Equipment Branch. Establishment operators should be aware of this responsibility before they purchase any equipment. Custom made equipment is accepted only for the submitting establishment and is not included in the list of accepted equipment.

PROCEDURES FOR OBTAINING ACCEPTANCE

The acceptance of new, modified, or re-conditioned equipment for use in federally inspected meat and poultry establishments is a two step process. First, Equipment Branch staff officers evaluate the design and construction of equipment by reviewing assembly type drawings with correlated parts material lists. Then, if necessary, USDA inspectors review the inplant operation of equipment and report their findings to the Equipment Branch. Commercially available equipment is accepted and listed in this book if it is determined to be sanitary and complies with all relevant criteria in the Federal Meat and Poultry Inspection Regulations.

1. Review of drawings - Equipment manufacturers, distributors, or establishment operators must submit the assembly type drawings to:

U.S. Department of Agriculture
Food Safety and Inspection Service
Facilities Equipment and Sanitation Division
Equipment Branch, Room 2168, South Building
Washington D.C. 20250-3700
Phone No. (202) 720-7386 Fax No. (202) 690-0486

The complexity and specificity of the drawings will vary depending upon the complexity of the equipment. In general, however, drawings must clearly illustrate the main construction features in top, end, and side views. More complex equipment must be presented to clearly illustrate the product contact areas by cutaway or section and the manner in which these areas are made easily accessible for cleaning and inspection. In addition, each functional component may require separate, detailed drawings. Each submitted drawing shall, without exception, include a correlated parts material list. In addition to identifying the parts by name and/or function, the parts material list must also identify the materials used to construct that part. In particular, components which are painted, plated, or made of synthetic materials shall be indicated. By reviewing the drawings, the Equipment Branch will determine if the materials of construction are acceptable and if the design appears satisfactory and free of safety hazards. In addition, the Equipment Branch will determine if a trial installation is necessary.

2. Trial installation - Trial installation, or experimental use, is the time period in which USDA inspectors review the equipment during inplant operation and report their findings. Establishment operators must request, in writing, a trial installation of commercially available equipment. A written request for trial installation must include:

- (1) the name and location of the equipment manufacturer,
- (2) the exact name and exact model identification,
- (3) the anticipated starting date for use of the equipment,
and
- (4) the length of the experimental period.

The experimental use dates are flexible and can be extended by additional written requests. The Equipment Branch, however, may deny an extension if an unacceptable sanitation problem exists.

The Equipment Branch will review the inspector's report and decide to:

- (1) accept the equipment,
- (2) hold for additional reports from other federally inspected establishments,
- (3) report any identified deficiencies to the manufacturer or plant and require modification, or
- (4) reject the equipment.

The establishment operator is provided a letter stating that the Equipment Branch does not object to the continued use of accepted, custom made equipment.

For commercial equipment which is accepted:

- (1) the establishment operator is provided a letter stating that the equipment is acceptable and
- (2) the manufacturer is provided a letter which serves as the proof of acceptance until the equipment is listed in this book.

The letter of acceptance to the manufacturer is no longer valid once the equipment is listed. If the installation of equipment requires significant changes in the present layout, new floor plan drawings showing the equipment in its proper location must be submitted to the Facilities Branch within 30 days of the acceptance.

Files that have had no action after a period of two years will be destroyed.

USE OF THE GUIDEBOOK

This book, Accepted Meat and Poultry Equipment, lists the commercially available equipment which has been formally reviewed and accepted by the Equipment Branch. New editions are periodically published for the use of USDA inspectors, equipment manufacturers, and establishment operators. Copies may be purchased from:

Superintendent of Documents
Government Printing Office
Washington D.C. 20402
Phone # (202) 783-3238

When equipment is listed in this book, the manufacturer must guarantee that all future equipment with the accepted model identification is of the same design, construction, and materials as depicted in the submitted drawings and parts material list(s). Any modification to an accepted piece of equipment shall be submitted to the Equipment Branch for review. Failure to meet this criteria may result in the revocation of the acceptance. Moreover, all future equipment of the accepted design shall be constructed using good workmanship. The USDA inspector may reject the use of equipment of poor quality workmanship. Inadequate service and maintenance, substitution of materials, and faulty installation are also reasons an inspector may reject the use of accepted equipment. Accepted equipment may, after a period of time, begin to show objectionable defects or faults which were not apparent when acceptance was authorized. The equipment manufacturer shall correct any serious problems otherwise the acceptance may be revoked.

The Food Safety and Inspection Service does not sanction the use in advertisements or promotional material of any shield, emblem, legend, or insignia indicating USDA acceptance of equipment. The only authorized reference to acceptance is in letters issued to applicants and in the List of Accepted Meat and Poultry Equipment. Inclusion in this list signifies the equipment complies with Meat and Poultry Inspection Program sanitary standards. It does not infer compliance with the Department of Labor's Occupational Safety and Health Standards.

Accepted equipment is alphabetically listed by manufacturer's name. The manufacturer's location (city and state) is included. This heading is followed by a listing of that manufacturer's accepted equipment with the corresponding model identifications. For example, an accepted shuttle conveyor (SC) with model numbers 1000, 1192, and 1293 manufactured by Acme Fabricators of Houston, Texas would be listed as follows.

ACME FABRICATORS

Houston, Texas

Conveyor: SC-1000, SC-1192, SC-1293

If these models were of the exact same design and construction (parts material) and differed only in size (eg., width, length), a single model identification could be used. This model identification would be:

ACME FABRICATORS

Houston, Texas

Conveyor: SC-....

The four dots would replace the four digits of each identification since these digits only reflect different sizes of the same conveyor. If these digits represent changes in the design or construction, then the listing would be the three separate model identifications initially depicted. Dots can be used to indicate differences in volume or capacity as well as dimensions.

NOTE: Manufacturers are responsible for notifying the Equipment Branch of any company name changes, mergers, and/or relocations. Without such notification, the Equipment Branch limits an acceptance to that equipment manufactured before the name change, merger, etc. Therefore, equipment manufactured afterward is not necessarily included under the acceptance. Furthermore, plant owners or operators shall not modify accepted equipment (either custom made or commercially available) without first notifying the Equipment Branch. Any modifications to accepted equipment for any reason voids the official acceptance by the USDA.

FREEDOM OF INFORMATION ACT

The Freedom of Information Act, 5 U.S.C., 552, provides that information in the possession of the Federal government must be made public upon request unless certain specified exemptions apply. One of these exemptions covers "trade secrets and commercial or financial information..." [5 U.S.C., 552, (b) (4)].

In order to protect the legitimate commercial interests of those submitting information to the Equipment Branch, the submitting party should identify all material considered to be either a trade secret or confidential commercial or financial information and supply a statement explaining why it is so considered. While this procedure will not guarantee that the information will be exempt from disclosure, it will ensure that the wishes of the submitting party will be given consideration in any decisions reached.

When the Equipment Branch receives a request for material identified as a trade secret or confidential commercial or financial information, the agency will notify the submitting party before disclosing the information. Questions concerning the Freedom of Information Act and its effect on the procedures of the agency should be addressed to:

Freedom of Information Coordinator
U. S. Department of Agriculture
Food Safety and Inspection Service
Room 334 - E, Administration Building
Washington D.C. 20250-3700

CHEMICAL CLEARANCE (USDA ACCEPTANCE)

Equipment components such as conveyor belts, sealants, coated parts, paints, metal alloys, and plastics, if not previously USDA accepted, shall be reviewed and evaluated by the:

USDA, FSIS, Product Assessment Division
Compounds and Packaging Branch
Building 306, Room 300, BARC-East
Beltsville, MD 20705

The review, evaluation, and acceptance of materials is based upon the following information supplied to the Compounds and Packaging Branch.

1. A brand name, code, part number, or other designation which specifically identifies the material to be evaluated.
2. A description of the intended use of the material. For examples, direct or indirect contact; high temperature; low temperature; high pressure; high friction; etc. (Unless otherwise specified, belting material will be evaluated for direct contact).
3. The complete chemical composition of the material. Dyes and pigments should always be identified by the 5-digit Colour Index Constitution number or structural formula. All other major and minor constituents must be identified by proper chemical names. If the material is used in direct contact with food, the constituents should be listed by proper chemical name as appears in the appropriate Food Additive Regulations (Title 21, Code of Federal Regulations) or by reference to previous USDA acceptance. If a proprietary formulation is used as an ingredient of the material, that ingredient may be identified by its trade name and its

manufacturer may submit the chemical composition to the Compounds and Packaging Branch in behalf of the component manufacturer.

NOTE: TECHNICAL DATA SHEETS, ADVERTISING LITERATURE, AND OTHER SIMILAR MATERIALS MAY BE USEFUL. HOWEVER, USDA ACCEPTANCE WILL NOT BE BASED SOLELY UP ON THIS INFORMATION.

Chemical formulations disclosed to the Compounds and Packaging Branch are retained in a confidential file and used only to evaluate the chemical acceptability of the material. Although suppliers may submit information to the Equipment Branch, they are encouraged to submit this information directly to the Product Safety Branch.

Equipment manufacturers should be aware that compiling and evaluating all of the necessary information on chemical composition may be a lengthy, time-consuming process. Therefore, equipment manufacturers may want to consult with their component suppliers regarding USDA acceptance of materials prior to submitting equipment for evaluation.

ACCEPTABLE MATERIALS

Equipment shall be constructed of materials that will not deteriorate from normal use under the anticipated environment. Therefore, equipment in meat and poultry plants must be constructed of materials that will withstand the generally humid operating environment and high pressure, hot water cleaning with strong chemical cleaning agents. In addition, equipment surfaces shall be smooth; corrosion and abrasion resistant; shatterproof; nontoxic; non-absorbent; and not capable of migrating into food product (staining).

The series 300 (18-8) stainless steel is acceptable for general use. Other series have been used for construction of meat and poultry equipment, but their use is limited because they tend to rust or discolor in certain applications. The abbreviation "S/S" is used throughout this publication to denote stainless steel construction.

Aluminum may pit and corrode when exposed to certain chemicals. When friction occurs between aluminum and meat or fat, a black oxide is produced which discolors the meat. Anodizing the aluminum does not eliminate this problem. Therefore, the use of aluminum is limited to applications where the metal does not contact the product or in which the product is suspended in water.

Surface coatings and platings may be used if the base material is nontoxic and rendered non-corrosive and the plating material is USDA accepted. Chrome, nickel, tin, and zinc (galvanization) platings will generally be acceptable for most appropriate applications. USDA acceptance of other plating materials and processes can be obtained from the Compounds and Packaging Branch. Surface coatings and platings must remain intact. If a surface coating or plating begins to peel or crack, the local FSIS inspector will disallow the use of the equipment.

Paints, cold galvanizing compounds, and surface coatings with characteristics similar to paints may be used if USDA accepted but not in or above the food product zone.

Plastics and metal alloys may be used if USDA accepted for the intended purpose and the physical characteristics are acceptable to the Equipment Branch. A representative sample of the material must be submitted to the Equipment Branch for evaluation.

Hardwood may be used for dry curing meat. In addition, solid (unlaminated) pieces of hardwood are acceptable as removeable cutting boards provided the wood is maintained in a smooth, sound condition and is free from cracks. Hardwood cutting boards must be the shortest dimension which is practical [preferably not exceeding 3 or 4 feet (.91 or 1.22m.)].

UNACCEPTABLE MATERIALS

Cadmium, antimony, and lead are toxic materials that cannot be used as materials of construction either as a plating or the plated base material. Lead, however, may be used in certain alloys in an amount not exceeding 5%.

Enamelware and porcelain are not acceptable for handling and processing food product.

Copper, bronze, and brass are not acceptable for use in the product zone. These materials may be used in air and water lines or for gears and bushings in component parts outside the product zone.

Leather and fabric are not acceptable materials.

DESIGN AND CONSTRUCTION

1. Equipment shall be designed so that all product contact surfaces can be readily and thoroughly cleaned with high temperature, high pressure water and caustic soap solution. Components such as electric motors, electric components, etc., which cannot be cleaned in this manner shall be completely enclosed and sealed.

2. All product contact surfaces shall be visible (or easily made visible) for inspection.

3. All product contact surfaces shall be smooth and maintained free of pits, crevices, and scale.

4. The product zone shall be free of recesses; open seams; gaps; protruding ledges; inside threads; inside shoulders; bolts; rivets; and dead ends.

5. Bearings (including greaseless bearings) shall not be located in or above the product zone. In addition, bearings shall be constructed so that lubricants will not leak or drip or be forced into the product zone.
6. Internal corners or angles in the product zone shall have a smooth and continuous radius of one-fourth inch (6.35 mm.) or greater. (Lesser radii may be used for proper functioning of parts or to facilitate drainage provided these areas can be readily cleaned).
7. Equipment shall be self-draining or designed to be evacuated of water.
8. Framework of equipment (if not completely enclosed and sealed) shall be designed to use as few horizontal frame members as possible. Furthermore, these components shall be rounded or tubular construction. Angle iron is not acceptable except as motor supports.
9. Equipment shall be designed, constructed, and installed in a manner to protect personnel from safety hazards such as sharp edges; moving parts; electric shocks; excessive noise; and any other hazards. Safety guards shall be removeable for cleaning and inspection purposes.
10. Welds shall be smooth, continuous, even, and relatively flush with the adjacent surfaces.
11. Equipment shall not be painted on areas which are in or above the product zone. (Other areas may be painted if the paint is USDA accepted).
12. External surfaces shall not have open seams, gaps, crevices, and inaccessible recesses.
13. Where parts must be retained by nuts or bolts, fixed studs with wing nuts shall be used instead of screws to a tapped hole.
14. Gasketing, packing materials, O-rings, etc., must be nontoxic, nonporous, nonabsorbent, and unaffected by food products and cleaning compounds.

INSTALLATION

Stationary equipment or equipment not easily moveable (i.e., no casters) shall be installed far enough from walls and support columns to allow thorough cleaning and inspection. In addition, there must be ample clearance between the floor and the ceiling. If these clearances are not possible, then equipment shall be sealed watertight to the surfaces. All wall mounted cabinets; electrical connections; and electronic components shall be at least one inch from the wall or sealed watertight to the wall.

Major pieces of equipment shall be shown on approved blueprints before installation. Drawings shall be submitted within 30 days of acceptance for equipment which is initially installed on an experimental basis.

WATER USAGE

1. Water wasting equipment - Water wasting equipment shall be installed so that waste water is delivered into the drainage system through an interrupted connection without flowing over the floor, or is discharged into a properly drained curbed area. Waste water from cooking tanks, soaking tanks, chilling tanks, and other large vessels may be discharged for short distances across the floor to a drain after operations have ceased and all product has been removed from the area.

2. Protection of water supply - An air gap shall be provided between the highest possible level of liquids in equipment and a directly connected water supply line(s). The air gap must be at least twice the diameter of the supply side orifice. If submerged lines are unavoidable due to design considerations, then the equipment must include a functional vacuum breaker which will, without fail, break the connection in the event of water pressure loss.

3. Re-circulation of water - Equipment which re-circulates water as part of its intended function shall be equipped with sanitary recirculating components if the water directly or indirectly contacts food product or the product contact surfaces. For examples, recirculating pumps shall be accepted for direct product contact and piping must be easily demountable with quick disconnect mechanisms at each change of direction.

In addition, establishment operators using equipment or systems which re-circulate water must have written approval of a water re-use procedure. This approval must be obtained from:

Water Re-Use Committee
USDA, Food Safety and Inspection Service
Room 1140, South Building
Washington D.C. 20250-3700

4. Valves on drainage outlets shall be easily demountable to the extent necessary for thorough cleaning. Overflow pipes shall be constructed so that all internal and external surfaces can be thoroughly cleaned.

CLEAN-IN-PLACE (CIP) SYSTEMS

Sanitation procedures for CIP systems must be as effective as those for cleaning and sanitizing disassembled equipment. Only equipment which meets the following criteria may be cleaned in place. Any equipment or portions of equipment not meeting these requirements shall be disassembled for daily cleaning and inspection.

1. Cleaning solutions, sanitizing solutions, and rinse water shall contact all interior surfaces of the system.
2. All internal surfaces shall be either designed for self draining or physically disassembled for draining after rinsing.
3. Pipe interiors shall be highly polished (120-180 grit) stainless steel or some other acceptable, smooth surfaced material which is easy to inspect.
4. Easily removeable elbows with quick disconnect mechanisms shall be located at each change of direction.
5. All sections of the system shall be capable of being completely disassembled for periodic inspection of all internal surfaces.
6. All sections shall be available for inspection without posing any safety hazard to the inspector.

PIPING SYSTEMS

Piping systems used to convey edible product (including pickle solutions) shall be readily disassembled for cleaning and inspection. Pumps, valves, and other such components shall comply with the sanitary requirements for USDA acceptance. Piping systems must be designed so that product flow will be smooth and continuous i.e., no traps or dead ends. Pipes must be either 300 series stainless steel or a USDA accepted plastic.

Clear demountable rigid plastic piping may be used for two way flow provided it is chemically and functionally acceptable. Opaque plastic piping may be used for brine for one way purposes only.

The above requirements apply to systems for conveying raw fat and to re-circulate cooking and frying oils. Black iron pipes with threaded or welded joints are acceptable for conveying completely finished, rendered fats. Continuous rendering is not considered complete until after the final centrifuge.

Pipeline conveying systems for aseptic processing and packaging shall comply with the requirements outlined in the Guidelines For Aseptic Processing and Packaging Systems In Meat and Poultry Plants. This publication is available from the Equipment Branch.

EQUIPMENT STANDARDS

The primary purpose of the Equipment Acceptance Program is to ensure that meat and poultry equipment is designed and constructed in a manner that it can be cleaned and inspected. When applicable, however, the Equipment Branch will impose any appropriate standards or agency requirements for operation and output.

Conditions of Use - The acceptance of equipment and the subsequent listing in this book is based on the assumption that the equipment will be used in accordance with all applicable regulations of the Food Safety and Inspection Service and/or any other governmental agency which may have regulatory authority applicable to the manufacture, distribution, and/or operation of the equipment. Furthermore, acceptance of equipment for sanitary design and construction must not be misconstrued as an acceptance of any processing or slaughter procedure(s). Acceptance by the Equipment Branch is contingent upon the appropriate use of the equipment as defined and/or limited by the Meat and Poultry Inspection Regulations. Procedures involving the use of equipment in a manner that deviates from its normal, expected use and/or the applicable regulations must be reviewed by the Processed Products Inspection Division or the Slaughter Inspection Standards and Procedures Division (as applicable).

In some cases, accepted equipment must be used only under certain specified conditions (i.e., conditions of use, 9CFR 381.53 and 308.5). For example, some slaughter equipment requires sterilization between each use. Therefore, sterilizers must be provided in conjunction with the equipment otherwise the equipment is not acceptable for its intended purpose. These conditions of use appear in parenthesis beside the listing of the accepted equipment.

MAGNETIC TRAPS AND METAL DETECTORS

The extensive exposure of some products to metal equipment such as grinders, choppers, mixers, shovels, etc., causes the possibility of metal contamination. Magnetic traps have been found effective in removing iron particles from chopped or semi-liquid products. However, these magnetic traps are not useful for removing nonmagnetic metals such as stainless steel or aluminum. Therefore, the use of electronic metal detectors is highly recommended for sausage emulsions, can filling lines (especially baby foods), etc. Metal detectors are usually installed so an alarm (either a bell or light or both) is activated when a metal fragment is in the detection zone. The production line should stop automatically when the detector is activated. Alternatively, some systems are arranged so that the portion of the product containing the metal contaminant(s) is automatically removed from the production line.

The Food Safety and Inspection Service does not currently regulate the use of metal detectors for normal production. The agency does encourage meat and poultry plant operators to voluntarily use metal detectors whenever possible. The Equipment Branch reviews and evaluates metal detectors using the same sanitary standards applied to other types of equipment.

The sensitivity and reliability of metal detectors varies depending on aperture size, type of food product, frequency and method of calibration, and numerous other variables. Since many of the involved factors are not related to the design of the unit itself, the Equipment Branch does not currently classify metal detectors. However, the following classification standard is offered on a voluntary basis.

Classification*	Spherical Diameter	Type of Metal
A	1/32 inch (.794 mm.)	316 stainless
B	1/16 inch (1.588 mm.)	316 stainless
C	1/ 8 inch (3.175 mm.)	316 stainless
D**	---	---

*To test a metal detector, a metal sphere of the size and type indicated (generally imbedded in an acceptable, non-metallic material) is passed through the center of the aperture. The detector must detect in at least 9 of the 10 pass throughs to qualify for the applicable classification.

**The "D" classification identifies those detectors which are either not sensitive to the 1/8 inch (3.175 mm.) level or are installed in a manner that prevents testing in the described fashion.

CONVEYOR BELTS

Conveyor belts used in direct contact with food product must be moisture resistant and nonabsorbent. Cotton carcass belts must have the edges sealed with the same material as is used for the food contact surface. In addition, belting material must be chemically acceptable.

JET-VACUUM EQUIPMENT

Equipment used for cleaning jars or cans shall have safety devices to indicate malfunction of either jet or vacuum elements. If necessary, vents to the outside shall be provided to control exhaust currents and to prevent dust and/or paper particles from being blown back into cleaned containers.

HOSES

Hoses used for product contact shall be accepted by the Equipment Branch. The hose material must be installed in a manner which allows for inspection of the interior surface. Sanitary connectors can be installed at appropriate intervals to allow breakdown for visual inspection or use of inspection devices, such as, boroscopes.

Hoses without sanitary connectors are acceptable for steam and water lines where breakdown for cleaning and inspection is not necessary. However, hoses used for re-circulating water into and out of product contact areas must satisfy the requirement for product contact hoses.

PICKLE LINE

Pickle lines shall be either stainless steel or some other USDA accepted material. If re-circulated, pickle shall be filtered and re-circulated through a system that can be disassembled to the extent necessary for thorough cleaning and inspection.

SMOKEHOUSES, OVENS

Smokehouses or ovens must be designed for easy cleaning and inspection of all inner and outer surfaces. Ducts shall be designed to be easily disassembled to the extent necessary for thorough cleaning and inspection. Spray heads for dispensing liquid smoke must be mounted below the level of the rails and trolleys. If liquid smoke is to be recirculated, the pump and pipelines must be of sanitary type construction. Liquid smoke cannot be recirculated if product is on rack trucks.

SCREENS AND FILTERS

Screens and straining devices shall be readily removeable for cleaning and inspection and shall be designed to prevent incorrect installation. Permanent screens shall be constructed of non-corrosive metals. Synthetic filter materials shall be USDA accepted (for direct or indirect contact, as applicable). Filter paper shall be single service. Filter cloths shall be washable.

Asbestos is not acceptable for use as filtering material or for any other purpose.

OZONE PRODUCING EQUIPMENT

Equipment which produces ozone may be used only in coolers designated for aging meat. The ozone concentration in the air must be measured and recorded with appropriate devices and cannot exceed .1 ppm. Ozone generating equipment shall be turned off and the ozone permitted to dissipate before USDA inspections are performed.

VENT STACKS FROM HOODS

Vent stacks from covered cooking vats or hoods over cook tanks and CO₂ equipment should be arranged or constructed so as to prevent drainage of condensate back into the product zone.

ULTRAVIOLET (UV) LAMPS

Ultraviolet lamps which generate ozone are restricted for use as described under Ozone Producing Equipment above. UV lamps which do not produce ozone may be used in any area provided shields are used to prevent exposure of inspectors to direct or reflected UV rays. Otherwise, rooms where unshielded UV lights are used shall be equipped with switches at all entry points so the units may be turned off before inspectors enter. These switches shall be identified with suitable placards such as, "Ultraviolet Lights". Inspectors shall not enter areas where unshielded UV lights are burning because of possible damage to skin and eyes.

HEAT EXCHANGERS

Heat exchangers may be used to heat or cool product. Heat exchangers may also be used to heat or cool gasses or liquids which directly contact product. However, extreme caution shall be exercised to prevent contamination. Inspectors and plant personnel shall be alert to the following conditions and requirements.

1. Only heat exchanger media accepted by the Compounds and Packaging Branch (see page 7) can be used for applications involving food product. Common materials such as brine or ammonia need not be submitted for review. Under no circumstances can toxic materials be used.
2. Heat exchangers shall be routinely pressure tested to ensure that pinholes, hairline cracks, loose fittings, or other similar defects are not present. Presence of off-color, off-odor, and/or off-flavor may indicate leakage. Frequent depletion of heat exchange media may also indicate leakage.
3. Pressure on the product side shall be higher than the media side.

INPLANT TRUCKS

Trucks used to transport product within the plant should be constructed of stainless steel. However, galvanized metal is acceptable provided it is maintained in a good state of repair and is regalvanized when necessary. Trucks should be free of cracks and

rough seams. Metal wheels should be avoided as they cause deterioration of the floor surfaces. All trucks should have some means of affixing a tag. This can be accomplished by drilling two holes approximately 1 inch (25.4 mm.) apart in the lip of the truck to accomodate string or wire.

AIR COMPRESSORS

Compressed air may be used to directly contact product and/or product contact surfaces provided the air is filtered before entering a compressor and it is clean and free of moisture, oil, or other foreign material when contacting product or product contact surfaces. Lubricants and coolants directly contacting air shall be accepted by the Compounds and Packaging Branch (see page 7).

Compressed air storage tanks shall have a drain. Water and oil traps must be located between storage tanks and the point of use. Spent air must be exhausted in a manner to prevent product contamination.

Air directly contacting product or product contact surfaces shall be filtered as near the air outlet as feasible. Filters shall be readily removeable for cleaning or replacement and shall be capable of filtering out 50 micron particles (measured in the longest dimension). Air intake on votators shall also be filtered.

PRODUCT RECONDITIONING EQUIPMENT (for meat)

Product which is accidentally soiled may be cleaned on a separate, conveniently located wash table or sink. This wash station shall be properly equipped with sprays and a removeable, perforated plate to hold product off the bottom. The station shall be identified as a "product wash station" and cannot be used for hand or implement washing.

ELECTRIC CORDS

Accepting the use of electric cords shall be based on both sanitary and safety considerations. Drop cords suspended from the ceiling may be retractable and used to connect portable equipment on an as needed basis if the cords are properly wired to the power source. Electric cords shall not be strung across the floor even on a temporary basis.

ELECTRIC INSECT TRAPS

Electric insect traps may be used in edible product handling and storage areas provided the following conditions are met.

1. The equipment shall be made of acceptable non-corrosive materials.
2. The traps must not be placed above uncovered product or above uncovered product traffic ways.
3. The electrified components are either apparent or properly identified; insulated from non-electrified components; and covered with a protective grille to prevent electric shock hazard.
4. The equipment shall have a removeable shelf or drawer which collects all trapped insects.
5. The equipment is designed and constructed so that all dead insects are trapped in the removeable shelf or drawer. (Insects must not collect on the protective grille).

Removeable drawers or shelves shall be emptied as often as necessary. If the drawer or shelf becomes full of dead insects, then the fourth requirement above cannot be met so the equipment shall be rejected for use. Dead insects must be removed from the unit before they create an odor problem. They cannot be left in the unit as "bait".

INEDIBLE PRODUCT EQUIPMENT

Containers for handling and transporting inedible products shall be watertight; maintained in a good state of repair (no rust or corrosion); and clearly marked with an appropriate identification. All inedible product containers in the plant shall be uniformly identified. Inedible product containers shall be cleaned before being moved into an edible products department.

Metal barrels, tanks, or trucks may be used for holding inedible poultry products in specially designated inedible product rooms. Alternatively, the containers may be stored outside the building provided the storage area is paved, drained, and conveniently located. These storage areas shall also be equipped with nearby hose connections for cleanup.

BAND-TYPE CARCASS SPLITTING SAWS

Wasted flush water must not be allowed to contact carcasses, operators, or surrounding equipment. Accepted band-type saws include drain hoses designed to contain and divert wasted flush water to a convenient drain without having the water flow across the floor. The following guidance is provided on the basic conditions which normally must be met to assure sanitary use of band-type splitting saws:

1. As currently designed and constructed, band-type saws are not acceptable for use prior to viscera inspection. Until a determination based on the viscera inspection can be made and the affected carcass is suitably identified, each carcass is presumed

to be potentially suspect. Consequently, splitting saws would require sanitization between each carcass. This is an unrealistic condition of use given the current design.

2. If used following viscera inspection, band-type saws need only be sanitized after splitting carcasses which have been marked or tagged for further inspection or when abscesses or other hidden disease conditions or contamination are cut into during splitting.

3. A suitable area and accessory equipment (such as sterilizing tanks, racks, etc.) must be available for sanitizing the band-type splitting saws. A sanitization method is not acceptable unless all bone dust and other debris is removed from the housing PRIOR to the exposure of the saw blade to 180 degree F. (82.2 degree C.) water. In addition, the blade must be exposed to the 180 degree F. (82.2 degree C.) water for a minimum of eight seconds.

AUTOMATIC POULTRY EVISCERATING EQUIPMENT

All surfaces of automatic poultry eviscerating equipment which come in contact with raw product must be sanitized between each use. Sanitization may be accomplished by flushing the contact surfaces with either 180 degree F. (82.2 degree C.) water or with water containing 20 ppm residual chlorine at the point of use.

HOCK BLOW-OFF EQUIPMENT

Filters used on the compressed-air line shall be readily removeable for cleaning or replacement and shall be capable of filtering out 50 micron particles.

The air-pressure must be measured and recorded with appropriate devices and must be set to deliver 75 to 125 PSI (5.27 to 8.79 Kg/sq. cm.).

The blown air must be confined so that it is captured by a water curtain or by an exhaust system that has a suction of at least 1500 CFM (425 Hectoliters/min.) at the point of exhaust.

The hock blow-off system should not be used as a substitute for good dressing procedures. Dressing contamination more than 2 centimeters in length in its longest dimension must be handled as usual and trimmed. Foreign material (e.g., dirt, specks, and hairs) should be removed and not spread to the round area.

The compressed-air system should not be used on carcasses with fecal contamination. Such carcasses are to be handled and trimmed in a sanitary manner.

OZONE WATER TREATMENT AND RECYCLING EQUIPMENT

Equipment used to ozonize and recycle water shall be constructed from non-corrosive type material with safe and easy access for cleanup and sanitary inspection of all component parts. Pumps and piping shall be of acceptable sanitary type, demountable, with quick disconnect mechanisms at each change of direction. Tanks, funnels, ozone generators, filter housings and filter media shall be USDA accepted and easily demountable for cleanup and sanitary inspection. The establishment operators shall obtain written approval of a water re-use procedure from the Sanitation Branch. They shall also have written procedures for measuring and recording the total bacteria count and the total organic carbon level (TOC) in the ozone treated water returning to the source of use. (Established guidelines: a total aerobic plate count of less than 1000/ml, coliform less than 10/ml, and E. coli less than 2/ml).

All systems shall have monitoring devices on line:

1. to measure and record the ozone level and concentration in the immediate area (Ozone concentration cannot exceed .1 ppm);
2. to measure and record ozone level and range of turbidity in the water being returned to the source of use (All ozone must be dissipated at this time and turbidity must be within the range of 0.5-5.0 NTU [nephelometric turbidity units]; and
3. to automatically interrupt the water flow if the quality of the ozone treated water does not comply with established NTU guidelines.

DEFINITIONS

Accessible: Easily exposed for regular cleaning and inspecting with simple tools such as those normally carried by cleaning personnel.

Readily accessible: Easily exposed to sight and touch for regular cleaning and inspecting without the use of tools.

Removeable: A component part can be separated from the principal part with simple tools such as a screwdriver, pliers, or open-end wrench.

Readily cleanable: The equipment can be cleaned with hot water, cleaning agents, and scrubbing implements normally used by cleaning personnel.

Corrosion resistant material: A material which maintains its original surface characteristics under prolonged exposure to the normal environment including product, ingredients, ambient conditions, and cleaning and sanitizing materials.

Acceptable materials: Materials which have been found to be chemically acceptable and physically suitable for the purpose intended.

Sealed: Having no openings that permit the entry of product, dirt, or moisture.

Product zone: All surfaces of the equipment which may normally be directly or indirectly exposed to product or ingredients.

Nonproduct zone: All surfaces of the equipment outside the product zone.

 Automatic Vent Cutter: VC-II [Surfaces of machine contacting

carcass must be sanitized with 180 F. (82.2 C.) water or solution of 20 ppm residual chlorine at point of use.]

Reprocessing Station w/Chlorinator. S.T.-1
 Broiler Unloading Station: AD-1, AD-2
 Hock Picker: HP-1
 Poultry Killer: MK-3
 CO2 Tunnel: ZT-1
 Weighing System: Mark I (Consisting of - Weighing Machine: HB-83, Line Clearer: LC-101, Weighing Shackle: WS-101)
 Weight Distribution System: WG
 Poultry Cut-Up Saw: MSC-1
 CD6000 Gizzard Harvester: 033303
 Neck Skinner: NS-1
 Whole Breast Filleting Machine: 06-08-01
 Final Inside/Outside (14 Unit) Bird Washer: 033713
 Scale and Packout Conveyor: 06-08-01
 Dewatering Tumbler: DT-2
 Poultry Killer: RW-1, MK-3
 Eviscerating Machine: Apollo-72, Apollo IV, U80 (Manual positioning of viscera for inspection necessary.) [Surfaces of machine contacting carcasses must be sanitized between each use with 180 deg. F (82.2 C.) water or solution of 20 ppm residual chlorine at point of use.]
 Disc Pickers: JM..., JMKD...
 Automatic Electric Waterbath
 Stunner: AS-2 [Water level must not exceed 1/4" (6.35 mm) depth above screen.]
 Automatic Vent Cutter: VC-11 [Surfaces of machine contacting carcass must be sanitized with 180 deg. F (82.2 deg. C) water or solution of 20 ppm residual chlorine at point of use.]
 Automatic Pre-Stomach Machine: PS-11 (Personnel must be provided to trim portions of digestive tract not removed by the machine and must be in addition to the auxiliary peeler.)
 Automatic Opening Machine: "Jupiter" 111 [Surfaces of machine contacting carcass must be sanitized between each use with 180 deg. F. (82.2 deg. C.) water or solution of 20 ppm residual chlorine at point of use.]
 Automatic Bird Bagger: BB-1, PM-80
 Inside-Outside Final Birdwasher: BW-2
 Weighing System: Mark 1 (Consisting of Weighing Machine: HB-83, Line Clearer: LC-101, Weighing Shackle: WS-101)
 Leg Processor: LP-1
 Automatic Opening Machine: Mark II "Mark" III-.. [Surface of machine contacting carcasses must be sanitized between each use with 180 deg. F. (82.2 deg. C.) water

or a solution of 20 ppm residual chlorine at point of use.]
Automatic Breast Fillet Machine:
 1200
Automatic Cropping Machine: ACM-510
 [Surfaces of machine contacting carcass must be sanitized between each use with 180 deg. F. (82.2 deg. C.) water or a solution of 20 ppm residual chlorine at point of use.]
Neck Breaker: CNB-14 [If used prior to inspection station, surfaces of machine contacting carcasses must be sanitized between each use with 180 deg. F. (82.2 deg. C.) water or 20 ppm residual chlorine at point of use.]
Final Vacuum Machine: FCM-500
Tail Cutter: TC-105
Wing Cutter (second joint): 06-04-02
Wing Tip Cutter: 06-04-03
Automatic Thigh Deboner: ATD-300
Giblet Wrapping Machine: "Haluwrap"
 GIB-80 Type SAH-80
Cut-Up System: 85-1 consisting of Wing Cutter, 06-04-01; Horizontal Bird Halving Machine, HM-651; Leg Separator, LS-691; Drumstick/Leg Unloader, 06-38-01
Whole Breast Filleting Machine:
 BFM-681
Final Inside/Outside (14 Unit) Bird Washer: F10-515
Scale and Packout Conveyor: SPC-682
Automatic Neck Breaker: "Graham"
 GANB-100
Thigh Drum Processing Machine:
 PTDMLS-1
Turkey Quill Puller: 034671
Inside/Outside Turkey Washer: 033771
Bagger: PM-90
